PENDANT 360

Model: STBF-24

American Ultraviolet[®]

Insightful Solutions. Remarkable Results.
— Since 1960. —

Upper Room Germicidal UV-C fixtures have been successfully used for nearly 100 years to help control the spread of airborne microbes. Properly designed and applied fixtures can help reduce the concentration level of microorganisms on surfaces and in the air in densely occupied spaces.

Providing 360° Upper Room Germicidal UV, the Pendant 360 series is ideal in spaces where wall-mounted upper room GUV fixtures are not adequate or efficient to cover the space.

The STBF-24 model is designed for high bay applications where a minimum mounting height of 12.5' is possible, such as airport concourses, gymnasiums, and conference centers where an aesthetically pleasing design and maximum coverage per fixture are important.

Using an array of UV-C lamps and incorporating a quiet fan and louvers, the Pendant 360 units provide a high UV-C fluence into the upper air of a room while confining the UV-C energy to the unoccupied space above 7.5-feet from the floor (when installed properly).

With eye bolts at the four corners of the fixture, the STBF-24 can be suspended from a high ceiling in a variety of ways.

Technical Specifications

Dimensions	40" x 40" x 10.2" high
Weight (approximate)	48 lbs. (22 kg)
Lamps	Four (4) Slimline UV-C 24" lamps
Electrical Requirement	120V/60Hz/5A
Coverage Area per STBF-24 Fixture	Varies based on ceiling height and mounting height of fixture. 1,000 - 1,440 ft ² .

Note: Fixture design and specifications subject to change.

Consult factory for pricing and availability.
